

**American
Chemical Society
Symposium**

**Advances in CO₂ Conversion and
Utilization**

August 16-20, 2009, Washington, DC

238th American Chemical Society (ACS) National Meeting & Exposition
Sponsored by the ACS Fuel Chemistry Division

Call for Papers

Symposium features research on all fundamental and applied aspects of CO₂ conversion and utilization. Topics include, but are not limited to:

- CO₂ conversion to syngas, oxygenates, hydrocarbons and fuels, fuel additives, chemicals, polymers, or new solid materials.
- Processes related to CO₂ conversion, such as photochemical processes, electrochemical processes, biochemical processes, new approaches, reactor designs, and new catalysts.
- CO₂ utilizations in refinery and chemical processing, for supercritical extraction and enhanced oil recovery, and as reaction and process medium.

Key Date for On-line Submissions:

January 19, 2009: Starting date for submission of both an abstract and a preprint on-line through the ACS OASYS website: <http://oasys.acs.org/oasys.htm>

March 16, 2009: Deadline for submission of both an abstract and a preprint on-line through the ACS OASYS website: <http://oasys.acs.org/oasys.htm>

Instructions and preprint template available at ACS Fuel Chemistry Division website: <http://www.anl.gov/PCS/acsfuel/preprintinfo.html>
